

ULANO[®] FRAME ADHESIVE REDUCER

Solvent based cleaning agent for adhesives

ULANO FRAME ADHESIVE REDUCER is a quickly evaporating solvent mixture to remove adhesive residues on caoutchouc, synthetic resin- and dispersion bases. Already cured two-components-adhesives normally are not dissolved anymore.

Application Method Apply ULANO FRAME ADHESIVE REDUCER onto a cloth or a cellulose strip and remove with it the adhesive residues. With persistent contaminations you may have to try a couple of times.

Please note: With plastics substrates and lacquered pieces, first one has to try the suitability prior to cleaning.

Colour	Colourless
Density	0,8 g/cm ³ approx.
Flash Point	-18° C approx.
Safety advice/ Environmental protection	Please check the resp. safety data sheet of those products used.
Storage	2 years (at 20° to 25° C in original containers)
